

## *CMUC CERTIFICATION MODE UNI COLOR*

The ACMS™ Module CMUC is used to create an ACMS™ certificate for single-coloured patterns.

Production release and / or production itself is certified based on the DeltaE2000 value. The value table displays the individual L\*, C\*, h° certification values.

This leads to an objective production assessment. In addition, physical samples indispensable for the visual evaluation, which without the existence of ACMS™ certificates would have had to be sent to the respective customer, are no longer necessary.

The use of CMUC-generated information combined with the creation of the certificate, allows for the considerable improvement of the cooperation between different value creation levels with regard to reliability, quality and efficiency.
